2021 Virtual Invitational Competition

Science Olympiad at the University of Pennsylvania (SOUP)

Corporate and For Profit Groups Sponsorship Information

What is Science Olympiad?

A national science competition involving middle and high school students in over 7600 teams across the US, where students compete on the regional, state, and national level in topic-based categories ranging from ornithology to forensics and truss-building to anatomy.

Who We Are, What We Do

At Penn, SOUP is a student-run organization that aims to promote science education. Each spring we organize one of the most competitive high-school-level Science Olympiad invitational tournaments in the country. We also spearhead the Urban Initiative mentorship programs in local middle and high schools in Philadelphia.

Why We Are Looking for Your Support

As a student group, we receive partial funding from the university's Student Activity Council but have traditionally met our budget needs through corporate and Penn departmental sponsorships and donations. This year, we are seeking to raise \$10,000 to cover event costs.

Your contribution will allow us to:

- provide and ship necessary materials to competitors
- invite prominent research and industry speakers
- transition to a scalable online platform

to build an accessible experience for all students.

What's Changing This Year?

Due to COVID-19, our tournament will be a virtually-connected event that aims to provide a learning experience that parallels our in-person tournament.

Students from all over the country will compete in our tournament from their homes.
